

## CLIMAT et IMPACTS 2020

The **6<sup>th</sup> edition of "Climat et Impacts" conference** will take place on 23, 24 and 25 November 2020 on the premises of the University of Paris-Saclay (École Centrale-Supélec, Orsay).

This new edition of **"Climat et Impacts"** conference aims to bring together scientific expertise on current and past climate variability, its causes, its impacts on ecosystems and its repercussions on past and present human societies. The thematic fields addressed by these scientific days, listed here, are not exhaustive and concern : (i) climate variability recorded in natural climate archives (ice cores, marine and continental sediments, bio-carbonates, tree rings...) on different time scales (geological to historical), (ii) the dynamics of the response of biodiversity and continental and marine ecosystems to climatic and anthropogenic forcings and induced feedbacks, (iii) the predictability of future climates, (iv) the relationships between past human societies and their environment, (v) the social, economic and health sciences perspective on current climate change ...

The presentations will be divided into oral and poster presentations. A few invited presentations will open the sessions. As usual, a large space will be reserved for poster presentations and exchanges. For this purpose, we have rented the *Joël Rousseau* Theatre and a large Hall in the *Eiffel* building of the École Centrale-Supélec to comfortably organize these days. We will thus be able to accommodate the ever-increasing influx of participants that we have observed over the various editions, without having to refuse registrations as was the case in 2018.

**We are now launching a call for session** in order to bring out topics and create new synergies within our scientific communities. Share your ideas with us, topics that are currently "stirring" the community and around which all participants in Climate and Impacts 2020 will converge. Please send us your proposal in no more than half a page (to be sent to [christophe.colin@universite-paris-saclay.fr](mailto:christophe.colin@universite-paris-saclay.fr) and [Christine.Hatte@Isce.ipsl.fr](mailto:Christine.Hatte@Isce.ipsl.fr)). Taking into account the proposals received, we will draw up a pre-program for these three scientific days so that everyone can find a session that corresponds to his/her research and so that the current issues are well represented. Thank you to the proposers, to accept in advance the groupings. We are waiting for your proposals **until May 30th**.

Registration and sending of abstracts will be open from this summer.
